LABENCOR acquires two new chambers for conducting corrosion tests. A CYCLIC chamber and a test chamber for SALT SPRAY (ACETIC/CUPROACETIC).

LABENCOR has recently acquired two new chambers for conducting corrosion tests. A **CYCLIC** chamber for combined cycle testing and another chamber for **SALT SPRAY (ACETIC/CUPROACETIC)** testing.

With these new acquisitions, we expand our capacity to carry out tests, trying to satisfy a large number of customers who have been requesting this type of tests demanded by the main automotive manufacturers, as well as other sectors.

Today, we have a **large number of equipment**:

7 combined cycle chambers
4 chambers salt spray (2 chambers NSS y 2 chambers AASS/CASS)
2 climatic chambers
2 Kesternich chambers
2 humidity chambers
1 condensation chamber

This allows us to have sufficient capacity to start the tests practically immediately, which, considering that there are trials that can last up to 12 weeks, is of vital importance.

More and more customers are relying on Labencor, whose competence has been recognized and demonstrated and, requesting its services, currently positioning it as one of the reference laboratories in corrosion testing.

More information on the services we offer can be found at:
